EnTeleBundle
EnTelegent | Telecom Management

EnTele-Bundle delivers a powerful set of tools that provides a single point of administration and control for all telecom providers, services, activities and invoices.

EnTele-Bundle Delivers Value

Get a centralized inventory for circuits, services, costs, contracts and invoices. EnTele-Bundle reconciles billing to internal documentation for real-time reporting - which is accessible anywhere, anytime-via secure web portal.

This capability can increase the effectiveness of your IT, purchasing, budgeting and accounting functions.

Consolidated Billing

The EnTelegent consolidated billing and invoice processing structure reduces the number of bills and checks that have to be processed by your Accounts Payable resources.

No matter which carriers you use, EnTelegent can receive and process their invoices for you. EnTelegent Solutions receives your invoices, reviews them for accuracy and summarizes them.

Bill-Pay

EnTelegent can pay the invoices and send you a summary invoice, or we can present you with a consolidated remittance report for direct payment to the carriers. You benefit from a simplified, consolidated bill-pay process.

Order Management/Trouble and Repair

Centralized service ordering, change management and repair tracking provide you a one-stop-shop for customer care and repair needs. EnTelegent will handle those calls, track them and see them through to resolution. This frees you to focus on the enterprise instead of managing service issues.

Optimization

Contract and service optimization brings you cost-effective contracts visibility and reporting for best-in-class sourcing, management and control.

Quarterly Value Report

EnTele-Bundle also delivers optimization analysis of your existing telecom environment. EnTelegent will provide quarterly reporting about your telecom program as well as identify opportunities to improve the efficiency and lower the cost of your services.
