Redwood Shores, CA

Number of Employees:
1,000+

Total Revenue Fiscal 2015:
$234 million

Countries: 100

Partners: 500+

Customers: 4,800+

We Protect What Matters Most

Imperva has a singular purpose: to defend your business critical data and applications from cyber attacks and internal threats. Our solutions enable you to discover assets and risks, then protect your most valuable information – such as intellectual property, business plans, trade secrets, customer and employee information, and the day-to-day data that drives your business. We also help you comply with the myriad of increasingly stringent data protection regulations and mandates, as well as enforce policies, entitlements and audit controls.

We help you to:

Discover
your assets and risks

Protect
your information

Comply
with regulations

Imperva Cyber Security Solutions

IMPERVA SECURESPHERE

Imperva SecureSphere is a proven cyber security platform that protects business critical applications and data. SecureSphere Web Application Firewall protects enterprise services and applications. SecureSphere Data Audit and Protection scales to meet data security needs of even the largest organizations, and the SecureSphere Platform backed by the Imperva Defense Center enhances protection against newly discovered vulnerabilities and threats.

- Stop attacks on web applications and protect website user credentials
- Prevent cybercriminals from abusing web application functionality
- Discover sensitive data, monitor user access and easily meet compliance
- Protect sensitive data in databases, file shares and big data repositories

IMPERVA COUNTERBREACH

Imperva CounterBreach is a multi-layered security solution that protects enterprise data from theft and loss caused by compromised, malicious or careless users. Machine learning technology proactively alerts security teams to dangerous data access and non-invasive deception technology identifies compromised end-point devices.

- Identify compromised, careless and malicious insiders
- Pinpoint potential data breach activity
- Uncover compromised devices
- Quarantine risky users

IMPERVA THREATRADAR

Imperva ThreatRadar is an advance-warning system that stops emerging threats before they impact your business. By collecting, comparing and analyzing attack data from a variety of trusted sources, ThreatRadar delivers early detection and an effective defense against constantly evolving threats.

- Improve security posture with real-time threat intelligence
- Keep newly discovered web-based threats from exploiting vulnerabilities
- Protect business apps from internet bots and account takeover attacks
- Reduce security analyst workload

Imperva Cyber Security Solutions

IMPERVA INCAPSULA

Imperva Incapsula is a cloud-based application delivery service that protects websites and accelerates their performance for the best possible user experience. Blending enterprise-grade security with performance optimization and load balancing, Incapsula provides unmatched protection for your web-based business.

- Shield critical online assets against web attacks
- Load balance web traffic
- Mitigate app and infrastructure DDoS attacks
- Optimize website performance

IMPERVA SKYFENCE

Imperva Skyfence is a cloud access security broker providing visibility and control over sanctioned and unsanctioned cloud apps. Skyfence addresses challenges that traditional security doesn't, so users can have the cloud apps they want–from Office 365 to Salesforce.com, Dropbox, Box, and hundreds more–while IT gets the visibility and control it needs.

- Discover shadow IT and assess risk
- Protect data in the cloud
- Control user access to SaaS apps
- Monitor user activity for compliance

CAMOUFLAGE

Imperva Camouflage is a data masking solution that will reduce your risk profile by replacing sensitive data with realistic fictional data. The fictional data maintains referential integrity and is statistically accurate protecting data from theft while ensuring compliance with regulations and international policies dictating data privacy and transport.

- Mask large volumes of data quickly and easily
- Prevent sensitive data loss from non-production systems
- Facilitate data transport outside the company
- Meet compliance and international data privacy regulations

Our Customers Include:

- 7 of the top 10 global telecom providers
- 5 of the top 10 U.S. commercial banks
- 3 of the top 5 global computer hardware companies
- 3 of the top 5 global biotech companies
- 3 of the top 5 global diversified insurance companies

Cyber Security Leader

Imperva protects your business-critical data and applications – in the cloud and on-premises.

How We Do It

Traditional security is no longer enough. Perimeters may be your first line of defense, but they are also the most porous. And endpoint security cannot defend against intentional or unintentional malicious actions by internal users.

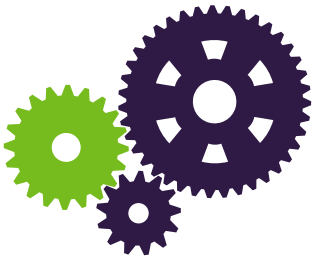
That's where we come in. Imperva protects cloud applications, websites, files, SharePoint systems, critical databases, and Big Data repositories from cyberattacks, theft, and fraud. Our technology provides visibility into data access and uses sophisticated client classification and user tracking that can detect unauthorized users and malicious web bots. We also employ a research team – the Imperva Defense Center – comprised of some of the world's leading experts in data and application security to root out new attack methods and stop them before they reach you. So whether your critical information is onpremises or in the cloud, in your application, or a SaaS app, you can feel 100 percent confident that Imperva will protect your data where it resides and how it's accessed.

Why Imperva?

While we work hard to protect your company's information and help you comply with regulations, we provide even further value in our solutions' flexibility and ease of use. What we bring to the table are three advantages that make our total value of ownership much greater than any other security and compliance system.

Fast to Deploy

Grows Smarter



Easy to Manage

Our Commitment to You

According to recent reports cited by the White House, cyber attacks have increased five-fold since 2009, and these new threats will continue to escalate in frequency and ferocity. We are committed to supporting and working with you over the long run – helping you keep up with security and compliance challenges by focusing on what really matters. Your data and applications.
