# Stay Competitive By Enabling Remote Workers with the Right Communications Platform

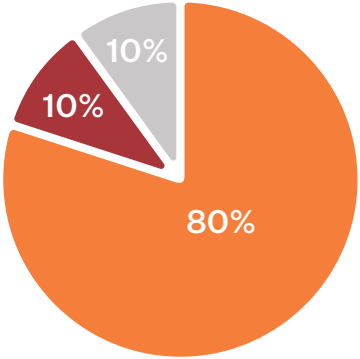
E-Book

## Worker expectations are changing.

The modern workforce is beginning to reduce commuting days as traffic continues to rise. Global Workplace Analytics reveals that 4.3 million employees (3.2 percent of the workforce) now work from home at least half the time.

## Millennials and older workers want to work remotely part of the time.

As millennials grow into management roles, they are more likely to request and support telecommuting for themselves and their teams.



80 to 90 percent of the US workforce says they would like to telework at least part-time. Two to three days a week allows for a balance of concentrative work at home and collaborative work at the office.

# 2019 Future Workforce Report

Report findings reveal significant financial and time savings were generated when team members work remotely.

- Telecommuters save between $2,000 and $7,000 a year.
- Workers gain back the equivalent of 11 days per year when they reduce their commutes.

# Significant benefits for employers, as well:

- Two-thirds of managers report that employees who work from home are more productive.
- Allowing a worker to telecommute half the time can save employers more than $11,000 a year.
- Collectively that's $44 billion in savings each year.

# Enabling remote work is a must to stay competitive.

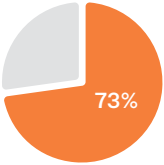
Larger companies are more likely to offer telecommuting options.

Fortune 1000 companies around the globe are revamping their work spaces around the fact that employees are mobile and frequently not working at a desk. SMBs must embrace telecommuting to remain competitive.

# Telecommuting reduces employee turnover and saves money

Telecommuting is an employee perk that can improve work/life balance and save your business money. Millennials would be willing to take an average pay cut of $7,600 for better quality work / life balance.

Companies that have telecommuting policies attract the best talent, drive innovation, and deliver greater value to their customers.
“The most in-demand professionals place high value on flexibility.”



73 percent of all small business teams will have remote workers by 2028

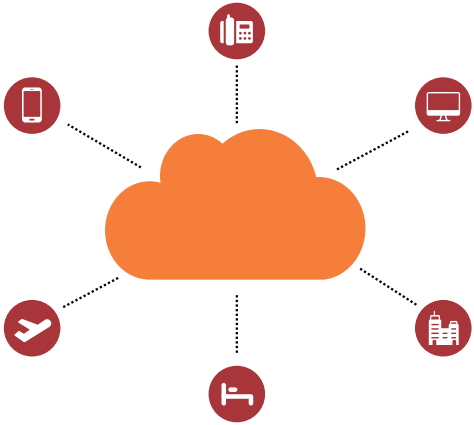
# High-quality cloud business communications enhance productivity.

Cloud unified communications, or UCaaS, is the answer for small and mid-sized businesses.  It enables SMBs to provide the same telecommuting benefits as large companies, while enabling their dispersed team members to use their business phone and communications solutions from anywhere.

Stay Competitive By Enabling Remote Workers with the Right Communications Platform

# Support your team and enhance your company's professional image without adding any IT demands.

One cloud-based solution works for your entire team. Easy to set up and deploy in minutes, not days. No IT maintenance required. Secure and reliable – built-in disaster recovery.



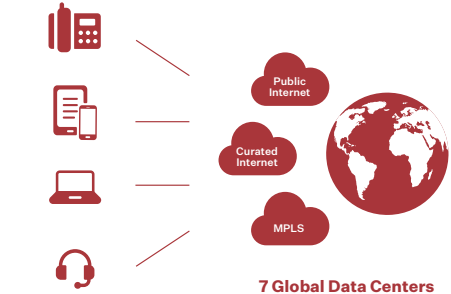
# Work from anywhere using your business communications system.

Ooma enables small to mid-sized companies to provide top rated business communications to all its workers and contractors, no matter where they are located. Nobody skips a beat – no missed calls, stay constantly connected with voice and video conferencing – same as they use in the office.

- Work from anywhere with your business phone system at your fingertips.
- Top quality voice and conferencing sounds crystal clear regardless of location.
- Call center capabilities; easy drag-n-drop call flows support your protocols.
- Virtual receptionist, call routing, ring groups, texting & more.
- Easy to set up, very affordable. Some businesses save 40 percent or more.

# Highly rated, affordable business communications as versatile as your business needs.

With most UCaaS providers, you are either limited to connecting via the public Internet or MPLS. Ooma supports both methods in addition to a lower cost curated Internet connection that provides enhanced connectivity for superior voice quality.



**Any device, anywhere globally.**

**Calls and meetings connect through the closest data center, delivering the highest quality VoIP over the shortest distances.**
