What We Do

XaaS1 is a provisioning and order management portal that provides a single interface for sales partners, managed services providers and VARs to find, provision and manage technology as a service.

Use the portal to find the services you need, the vendors that offer them, place the order and track it from order to installation.

How We Help You

We act as an “agent command console” to make it easy and efficient for you to serve your customers.

- Research vendors
- Place orders
- Manage the order through installation
- Ensure you receive the maximum commission when services are provisioned and delivered.

XaaS1 Beta

XaaS1 is launching its beta program on May 1, 2019. The beta program will accomplish the following:

- Onboard vendors & integrate with their systems
- Have partners experience the platform
- Optimize the user experience
